Subject: BART modeling results from WRAP
Date: Thursday, November 09, 2006 11:12:05 AM

Hi Nancy,

Wanted to let you know that we received a draft report from the WRAP contractor (Environ) on the BART modeling for all of our BART-eligible sources, and their results show SJGS exceeds the 0.5 dv threshold at Class I areas. WRAP and Environ are finalizing the report and we can share that with you as soon as we get it.

From here, our position is that PNM will need to do a BART analysis, unless you all would like to submit modeling to show that SJGS is not significant.

Mary
